

Antonio Cassio De Oliveira Segura

Miami, FL | antoniodeoliveirasegura@gmail.com | [LinkedIn](#) | [GitHub](#) | [Website](#)

EDUCATION

Purdue University, College of Engineering

Bachelor of Science, Computer Engineering (GPA: 3.1)

- **Coursework:** Advanced C Programming, Python for Data Science, Discrete Mathematics, Digital System Design, Multivariable Calculus, Differential Equations

Aug 2024 - May 2028

West Lafayette, IN

Yonsei University

Visiting Student, Electrical and Electronics Engineering

- **Coursework:** Software Engineering, Signals and Systems, Principles of Marketing, Law and Justice

Aug 2026 - Dec 2026

Seoul, South Korea

EXPERIENCE

OneBlinC (BlinCAdvance)

Software Engineer, previously Software Engineer Intern (May - Aug 2026)

May 2026 - Present

Hybrid

- Built serverless event-processing handlers on AWS (Lambda and SQS batch processing) with parameterized SQL, delivered across 3 merged PRs with unit tests and mock repositories, in a production AWS CDK stack (Python).
- Designed an automated repayment retry pipeline with SQL logic and payment error classification, plus a notification selector Lambda that batches reminder events for the collections platform.
- Migrated customer analytics from JavaScript to Django behind feature-flagged routing for a gradual rollout.
- Refactored 7+ event handlers into a unified dispatcher spanning the Django/DRF backend and Flutter mobile app, and improved error handling and CI checks across 3 production services (backend, mobile, and AWS infrastructure).

The Data Mine · Purdue University

Undergraduate Data Science Researcher

Aug 2025 - Dec 2025

West Lafayette, IN

- Analyzed diagnostic trouble code (DTC) trends in Allison Transmission telematics data with Python and pandas, surfacing recurring failure patterns for the team's vehicle-performance insights.
- Built automated Python scripts for data engineering and trend detection across real-world telematics datasets, cutting manual analysis time for the research team.

Purdue University College of Engineering

Undergraduate Teaching Assistant, ENGR 13300

Aug 2025 - May 2026

Indianapolis, IN

- Supported ENGR 13300 instruction by leading weekly in-class exercises and clarifying programming and engineering concepts using MATLAB, Python (pandas), and LaTeX; this hands-on guidance helped raise average exam scores and earned positive feedback from students.

Weldon School of Biomedical Engineering · Purdue

Undergraduate Researcher, Engineering First Time Researcher (FTR) Fellow

Jan 2025 - Dec 2025

Indianapolis, IN

- Researched PEDOT:PSS-MXene neural bioelectrodes, running cyclic voltammetry, EIS, and pulse-waveform characterization and analyzing results in Python and MATLAB to confirm improved conductivity and stability; co-authoring a manuscript in preparation for publication.

Goldman Sachs

Engineering Possibilities Summit

Jan 2025 - Dec 2025

United States

- Selected as 1 of 2,000 participants from a pool of 14,000+ applicants; completed a Controllers job simulation covering Net Asset Value calculation, unitized financial data, and Excel-based validation and reconciliation.

Vertically Integrated Projects (VIP) · Allegion

Project Manager Researcher

Aug 2024 - May 2025

Indianapolis, IN

- Programmed embedded C and Python firmware for IoT security prototypes and researched solar, thermal, and RF energy harvesting, analyzing energy-storage data in MATLAB to extend device battery life; collaborated with hardware and software teams using Onshape and PCB-design tools.

PROJECTS

BoilerIndy | github.com/Antoniodeoliveirasegura/boilerindy

Mar 2026 - Present

- Full-stack campus platform · React, Vite, Node.js/Express, Supabase (PostgreSQL), Playwright
- Engineered a full-stack campus app: 118 REST endpoints across 32 backend modules, 33 React pages, and a 32-table PostgreSQL schema, authoring ~82% of 222 commits while leading a 3-person team.
- Shipped 7+ feature areas (authentication, schedule sync with .ics calendar feeds, dining, community board, grade tracker, advertiser portal, AI assistant) and covered them with 30 unit and 6 Playwright E2E test files; deployed to Vercel and Render.

WC2026 World Cup Forecast | github.com/Antoniodeoliveirasegura/wc2026

Jun 2026 - Present

- Statistical match & tournament model · Python
- Built a Dixon-Coles bivariate-Poisson scoreline model (maximum-likelihood fit, 3-year time decay) with an Elo cross-check and a connectivity-weighted squad-value prior, reaching out-of-sample RPS of 0.17, on par with betting-market accuracy.
- Simulated the full 48-team tournament over the real draw and host advantage, producing calibrated title odds where no nation exceeds a 16% championship probability.

bysegura.com | bysegura.com

- Personal portfolio site · HTML / CSS / JavaScript, GitHub Pages
- Hand-built a no-framework responsive site with animated canvas backgrounds, persisted light/dark theming, and a live Twitch-status indicator served from a custom api.bysegura.com endpoint.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript (ES modules), C/C++, Dart, SQL, R, MATLAB, Bash
- **Frameworks & Libraries:** React, Node.js, Express, Django / DRF, Flutter, Vite, pandas, NumPy
- **Cloud & Data:** AWS (Lambda, SQS, CDK), Supabase, PostgreSQL, Vercel, Render
- **Testing & Tools:** Git / GitHub, GitHub Actions, Playwright, pytest, node:test, LaTeX
